Walk lasted between 12:00 and 14:10

We had a great walk with 28 species observed, 1.9 above the prediction and only 4 short of a record for the week. Laura Glass was a near miss.

She crossed paths with us at the ~60% mark and having tried to catch up with us in reverse, elected not to finish the walk. She had in tow

her 7 month old son Graham, who is beyond cute. She hopes to join on a regular basis after having been living out of town for a number of years.

it was good to see her. She last walked in 2016. The bird highlight was all the Cedar Waxwings we saw. They were in 3 places on campus and it was a real treat to see them. The find of a Townsend's Warbler at the end of the walk was greatly appreciated. I think warblers have under-performed this Spring. We used to see more Yellow, Wilson's, Orange-crowned, and Black-throated Grays that we've been seeing this year. But, overall, I can't complain too much as the number of species has been good.
