Walk lasted between 12:00 and 14:01.

We had a very good walk, despite the heat. We observed 19 species and that was only two short of the record for the week. And we didn't see Bushtits that were 75% probable. The highlight was the Nuttall's Woodpecker situation. We found a pair really chattering away just south of IPAC. Quite entertaining. And then we spotted a Cassin's Kingbird on Del Mar, which gave us one zero-probability bird. So, a very nice walk indeed.
