Walk lasted between 12:00 and 13:59

Another hot one, both temperature-wise and bird wise. We observed 25 species, beating the prediction by 3.7 species. We were only 3 short of the record for the week. On a 94F day, that's not bad. Good birds were the Ruby-crowned Kinglet, American Robin (x2), Spotted Towhee, and Say's Phoebe. We should keep our eyes peeled for a Western Meadowlark on the South athletic field. They were 38% probable today (and 38% probable last week) and at first I thought that might be what we were seeing at a distance. But, apparently that became the Say's Phoebe. Meadowlarks are on the list for the next few weeks but only at 12% probability. Still, worth a look. Good walk.
